

What is claimed is:

1. A simulated golf course comprising:

5                   a plurality of fairways with tees and holes for golf balls,

each fairway having a tee-area and a hole, each fairway having at least one  
concentric circular intermediate target areas spaced between each said tee area  
and each said hole distanced from each other;

10                  each said concentric circular intermediate target areas having a predetermined  
ratio of a sized diameter directly proportional to a predetermined sized  
distance of said concentric circular intermediate target areas from the tee of its  
respective said fairway;

15                  size of each said concentric circular intermediate target area utilized for an  
individual player is predetermined by their individual skill and ability; and

20                  multiple tees positioned in varying locations relative to a hole in order to aid  
players with higher handicaps.

2. A simulated golf course comprising:

25                   a plurality of fairways with tees and holes for golf balls,

each fairway having a tee-area and a hole, each fairway having at least one  
concentric circular intermediate target areas spaced between each said tee area  
and each said hole distanced from each other;

30                  each said concentric circular intermediate target areas having a predetermined  
ratio of a sized diameter directly proportional to a predetermined sized

distance of said concentric circular intermediate target areas from the tee of its respective said fairway;

5 size of each said concentric circular intermediate target area utilized for an individual player is predetermined by their individual skill and ability;

multiple tees positioned in varying locations relative to a hole in order to aid players with higher handicaps; and,

10 said fairways having artificial physical representations of scenery and landmarks.

3. A simulated golf course comprising:

15 a plurality of fairways with tees and holes for golf balls,

each fairway having a tee-area and a hole, each fairway having at least one concentric circular intermediate target areas spaced between each said tee area and each said hole distanced from each other;

20 each said concentric circular intermediate target areas having a predetermined ratio of a sized diameter directly proportional to a predetermined sized distance of said concentric circular intermediate target areas from the tee of its respective said fairway;

25 size of each said concentric circular intermediate target area utilized for an individual player is predetermined by their individual skill and ability;

30 multiple tees positioned in varying locations relative to a hole in order to aid players with higher handicaps;

said fairways having artificial physical representations of scenery and landmarks; and

5                   said fairways having simulated environmental effects such as wind, rain, snow, and amount of lighting

4. A simulated golf course comprising:

10                   a plurality of fairways with tees and holes for golf balls,

each fairway having a tee-area and a hole, each fairway having at least one concentric circular intermediate target areas spaced between each said tee area and each said hole distanced from each other;

15                   each said concentric circular intermediate target areas having a predetermined ratio of a sized diameter directly proportional to a predetermined sized distance of said concentric circular intermediate target areas from the tee of its respective said fairway;

20                   size of each said concentric circular intermediate target area utilized for an individual player is predetermined by their individual skill and ability;

multiple tees positioned in varying locations relative to a hole in order to aid players with higher handicaps;

25                   said fairways having artificial physical representations of scenery and landmarks;

30                   said fairways having simulated environmental effects such as wind, rain, snow, and amount of lighting; and,

said fairways being capable of being satiated with liquid, said liquid being removable from said fairways.

5. A simulated golf course comprising:

5

a plurality of fairways with tees and holes for golf balls,;

10

each fairway having a tee-area and a hole, each fairway having at least one concentric circular intermediate target areas spaced between each said tee area and each said hole distanced from each other;

15

each said concentric circular intermediate target areas having a predetermined ratio of a sized diameter directly proportional to a predetermined sized distance of said concentric circular intermediate target areas from the tee of its respective said fairway;

20

size of each said concentric circular intermediate target area utilized for an individual player is predetermined by their individual skill and ability;

multiple tees positioned in varying locations relative to a hole in order to aid players with higher handicaps;

25

said fairways having artificial physical representations of scenery and landmarks;

said fairways having simulated environmental effects such as wind, rain, snow, and amount of lighting;

30

said fairways being capable of being satiated with liquid, said liquid being removable from said fairways; and,

said fairway portions having deposited particles.

6. A simulated golf course comprising:

5 a plurality of fairways with tees and holes for golf balls,  
  
each fairway having a tee-area and a hole, each fairway having at least one  
intermediate target areas spaced between each said tee area and each said hole  
distanced from each other;

10

said fairways having artificial physical representations of scenery and  
landmarks;

15 said fairways having at least one simulated environmental effects including  
wind, rain, snow, and amount of lighting; and,

said fairways being capable of being satiated with liquid, said liquid being  
removable from said fairways.

20

7. A simulated golf course comprising:

a plurality of fairways with tees and holes for golf balls;

each fairway having a tee-area and a hole;

25

said tees being provided with a plurality of tee off positions.

8. The simulated golf course as in Claim 7 wherein said plurality of tee off positions  
comprises a plurality of discrete tee off positions.

30 9. The simulated golf course as in Claim 7 wherein said plurality of tee off positions  
comprises a plurality of concentric ring areas.
